Tech Tip

Trimble Mapping and GIS Field Software

New Activation Program

As of May 1st 2009, Trimble has started a new activation program for their field software - TerraSync and GPSCorrect for ArcPad. With the latest versions of these field software programs, a customer is now only allowed 1 activation per license. Once you activate the field software to a Trimble device, it stays with that device and cannot be installed on another handheld unless it is uninstalled and de-activated from the first unit.

What this means for the customer is that they have to go through an activation process to get the software registered. During this process you are required to put in the handheld model and serial number so the software is then tied to that product. The versions of software that this new process is required on are:

TerraSync v4.00 or later

GPSCorrect v3.00 or later

If you already have an existing license for TerraSync or GPSCorrect field software, we are not recommending an upgrade to these newer versions. This is only recommended for new licenses of field software purchased with new Handhelds. TerraSync v3.30 and GPSCorrect v2.42 offer the same features as the newer versions, without having to perform this new activation. Also, if you are using a handheld running a Windows Operating System prior to Windows Mobile 5.0 or 6.0, you cannot install TerraSync v4.00 or GPSCorrect v3.00 on these units.

Other Trimble software like Pathfinder Office and GPS Analyst Extension are not affected by this new activation program.

If you have any questions on this new activation program, please call our

Tech Support line at 888-797-4774

or your local FPI sales representative.
